New Herlev Hospital

| | |
|--------------------------|--|
| 📍 Location: | Copenhagen, Denmark |
| Shading Solution: | Roller Blind systems using Vestamatic Automation solutions delivering best-in-class shading performance. |
| Architect: | Henning Larsen |
| Delivery: | HLR |

The new extension development to Herlev Hospital features two circular buildings balanced on a rectangular base, surrounded by lush courtyards and a large central green. The design provides a natural outlook and abundant daylight for patients in the recovery process. The new facilities will contain a new emergency room and a woman and child center, including a pediatric and maternity ward.

Interior roller shades were fitted with shading control system that allows for central group and individual control. Blinds are controlled automatically for efficient solar heat and glare reduction, maintaining a controlled interior climate. Individual user control is still available to each room for both shading adjustment and privacy.
