

Quay Quarter Sydney

Location:	Sydney, Australia
Shading Solution:	Roller Blinds using Vestamatic Digital Motors
Delivery:	CRE
Architect:	3xn
Builder:	Multiplex

The 49 story QQT is an upcycle development project, reused the existing structure of the former AMP Centre (beams, columns, and slabs) and 95% of the original core, resulting in an embodied carbon saving of 7.3 million kilograms.

Over 1,900 automated Roller Blinds were installed using Vestamatic digital motor drives, connected by simplified cabling connections, delivering direct IoT feedback on motor drive status, blind positioning and performance.

The blinds are programmed and controlled by timed automation based on the buildings location and solar path positioning via a main building control system, integrated with a Building management system.
